Tags GTA VC CLEO Mods GTA VC Mods Using CLEO it's possible to add custom scripts written with Sammy Builder or another script editor to the game without starting a new game. Adding and removing a script is as easy as copying and deleting a file in the CLEO folder. These third-party scripts are entirely user-made and are in no way supported by the developers of this library. While CLEO itself should work in a wide range of game installations, individual scripts are known to have their own compatibility restrictions and can not be guaranteed to work. View details » CLEO 4 adds 100 useful scripting commands (opcodes) that make possible to work with external files, to change the game memory, to call exe functions with custom parameters and much more. New opcodes were added in the fourth version to play audio streams, to format strings, to display custom texts on screen without using external text files (.txt, .gxt). To assess all the achievements and use them in your scripts, install the latest version of the CLEO library. View details » CLEO plugins are dynamic libraries having the .cleo extension. At startup, the CLEO library scans the CLEO folder for the files with that extension and tries to load them. If successful, the plugins begin to work and do what they were made for. CLEO 4 allows to make new opcodes using sources of the CLEO SDK. The starter kit contains three examples of such plugins. Plugins are installed in the same way as scripts. View details » CLEO 4 is distributed in an archive. To install the library unpack the archive into the game
